SEWELL'S CHRONOLOGICAL TABLES.

(NOTE—*to be kindly inserted.*)

A WORD of warning is necessary for the guidance of those desirous of using these tables. It must be remembered that they were drawn up mainly for the use of those at work on inscriptions and historical documents; and the system adopted has been that of Prinsep, from whose "*Indian Antiquities*" (*Useful Tables,* p. 179,) the following note is extracted:—

"It should be borne in mind that the natives, in speaking or writing a date in simple years, always express the number of years *expired*, not the current year, as is the custom in Europe. When they mention the month, therefore, they mean the month of the following current year: but as the numerical denomination of the Hindú year remains unchanged throughout it, no thought need be taken of the distinction of *expired* years, unless where a calculation has to be made from an initial epoch. In common parlance they may be treated like the current years of any other system, as being more consonant with our ideas and less liable to cause mistakes in transferring dates to and fro."

In using these tables, therefore, it must be remembered that the *Ś. Śaka* and *Kaliyuga* years entered against the name of any particular cyclic year are the years whose numerical denomination is actually used in documents throughout that year, but that the real astronomical number is the one next following.

Thus; for the current year, *Chitrabhānu* (1882-1883), all documents would bear the *Śaka* number 1804, and the *Kaliyuga* 4983, but actually the current *Śaka* is 1805 and the *Kaliyuga* 4984. The expression used in documents would be "*Śaka* 1804 having expired," or "following on *Śaka* 1804."

R. SEWELL.

MADRAS, *April* 1882.

CHRONOLOGICAL TABLES.

THESE Tables are published in order to enable those at work on the Inscriptions of Southern India readily to ascertain the date of any document, or record on stone. The *Śālivāhana Śaka* era being the one most commonly used, it is placed in the first column. The *Kaliyuga* era is very commonly inserted in addition to the first, especially in the later inscriptions. The *Kollam* era of Quilon is only used in the Southern Tamil country and in Travancore. The name of the cyclic year occurs in almost all the inscriptions of Southern India since the tenth century. The year of the *Hijra* is only used in Muhammadan inscriptions. Burnell's "*South Indian Palæography*" (pp. 70—80) contains some very useful notes on the eras in use in the Madras Presidency. Prinsep's "Indian Chronological Tables," in Thomas's edition of the former's "*Indian Antiquities*" (Vol. II, pp. 131—214), constitute the most critically accurate information yet published on the subject. And Cowasjee Patell's "*Chronology*" (London: Trübner and Co., 1866) may with advantage be consulted; as well as Brown's "*Cyclic Tables.*"

Taking the *Śaka*, *Kaliyuga*, and cyclic years—which may be considered, for all ordinary purposes, to commence and finish simultaneously—as my base, I have thought it best to approximate the other eras to these, rather than to approximate all eras to the Christian, as is often done. And, since the *Śaka*, *Kaliyuga*, and cyclic years may be considered to commence together about March each year, it follows that the *Kollam Āṇḍu* of Quilon, which commences about September, runs half with one, and half with another of the former years; while the Christian year, commencing in January, runs three-quarters with one, and a quarter with the following of those standard years. Hence I have printed the two *Kollam* years in numerals of the same size, meaning that the *Śaka*, &c., year corresponds to half of one and half of the next years so printed; while the large and small figures of the Christian years mean three-quarters of the first and a quarter of the second. Thus, in the *Śaka* year 938, *Kaliyuga* 4117, cyclic year *Nala*, there were six months (or half) of the *Kollam* year 192, and six (or half) of 193; nine months (or three-quarters) of the Christian year A.D. 1016, and three months (or one-quarter) of A.D. 1017. If this be borne in mind, the difference in size of the figures will materially assist those desirous of ascertaining approximately the correspondence of dates in the different eras. But it must be strictly remembered that, in reality, there will be in every year a few days which vary, and therefore, if great accuracy be required, a far closer calculation must be made. For such purposes Prinsep's Tables will be found to be the most reliable guide.

The *Hijra* year,—commencing July 16th, A.D. 622 (the day following Muhammad's flight to Medina, which took place on the night of Thursday, 15th July),—being a lunar year, is incapable of being approximated to the solar years in a convenient tabular form, and I have therefore inserted in each year the actual day of its commencement in the corresponding Christian era. Where the *Hijra* date is given in an inscription it would be very rare to find any other era referred to, and therefore it seemed needless to make any tabular approximation between the Muhammadan and Indian systems.

SEWELL'S CHRONOLOGICAL TABLES.

(NOTE—*to be kindly inserted.*)

A WORD of warning is necessary for the guidance of those desirous of using these tables. It must be remembered that they were drawn up mainly for the use of those at work on inscriptions and historical documents; and the system adopted has been that of Prinsep, from whose "*Indian Antiquities*" (*Useful Tables*, p. 179,) the following note is extracted:—

"It should be borne in mind that the natives, in speaking or writing a date in simple years, always express the number of years *expired*, not the current year, as is the custom in Europe. When they mention the month, therefore, they mean the month of the following current year: but as the numerical denomination of the Hindú year remains unchanged throughout it, no thought need be taken of the distinction of *expired* years, unless where a calculation has to be made from an initial epoch. In common parlance they may be treated like the current years of any other system, as being more consonant with our ideas and less liable to cause mistakes in transferring dates to and fro."

In using these tables, therefore, it must be remembered that the *Ś. Śaka* and *Kaliyuga* years entered against the name of any particular cyclic year are the years whose numerical denomination is actually used in documents throughout that year, but that the real astronomical number is the one next following.

Thus; for the current year, *Chitrabhānu* (1882-1883), all documents would bear the *Śaka* number 1804, and the *Kaliyuga* 4983, but actually the current *Śaka* is 1805 and the *Kaliyuga* 4984. The expression used in documents would be "*Śaka* 1804 having expired," or "following on *Śaka* 1804."

R. SEWELL.
